

CDC Recommendations for In Person Learning

Universal Masking

Maximize Ventilation

Distancing

Cohorting

Cleaning

Hand Hygiene

Screening and prevention of sick or exposed individuals from entering the school

Case Identification, tracing and quarantine

DO choose masks that

Have two or more layers of washable, breathable fabric

Completely cover your nose and mouth

Fit snugly against the sides of your face and don't have gaps

Have a nose wire to prevent air from leaking out of the top of the mask

DO NOT choose masks that

Are made of fabric that makes it hard to breathe, for example, vinyl

Have exhalation valves or vents which allow virus particles to escape

Are intended for healthcare workers, including N95 respirators

Ventilation

Windows open

Fans adjacent to windows to maximize fresh air exchange

Independent HEPA units

Distancing

Evidence supports maintaining three feet separation between students when using a cohort model with universal masking

Six feet separation of adult staff from students is still recommended

At times when masks are removed (eating/drinking), six feet separation will be maintained

Cohorting

Students will be kept together as a single class throughout the day

Subsets of each cohort will be employed for meals to allow proper distancing

Cleaning and Hand Hygiene

High touch surface cleaning repeatedly during the day

Hand hygiene at room entry and exit, after bathroom breaks and before meals

Hand sanitizer available throughout the building

Case Identification and Tracing

Notify the school if your child is diagnosed with COVID or under Quarantine due to an exposure

Early Identification of exposures and illness and can prevent large scale shutdowns

Screening for Illness and Exposure

Have a Plan

Have a plan for what to do if anyone in the household becomes ill or has an exposure

Exposures

Do not send your child to school if you are aware of a COVID-19 exposure

Illness

Do not send your child to school if anyone in the home is ill with COVID-19 symptoms. Examples include: Fever, cold symptoms, sore throat, cough, muscle aches, headache

Success Beyond St. Mark School

Get Vaccinated if you are eligible.

Utilize masks whenever interacting with others beyond your household

Encourage Safe Play: cases due to transmission outside the school may lead to large scale quarantines at the school
